

Using the remover: 1. Place the tool over the body of the tick (brown dot), ensuring the base of the remover is flat against your skin.

2. Pull the tick remover slowly and steadily away from the tick, so that the tick becomes wedged against the end of the remover.

3. Wash the area with disinfectant.

- **Do not** touch the tick with your bare hands or use your fingers to remove the tick.

- **Do not** squeeze the body of the tick.

- **Do not** put alcohol, nail polish remover, Vaseline, hot matches or cigarettes on the tick to try and make it “back out.”

Watch for symptoms for 30 days. Call your health care provider if you get any of the following: Rash, Fever, Fatigue, Headache, Muscle Pain, Joint Swelling and Pain.

**Albany County
Department of Health**

**CDC
Tick Bite Bot**
